Protocol for all cases involving completely edentulous arch restoration

- Prior to extractions an immediate denture needs to be fabricated (\$600) which will need to be relined with a soft liner after surgery.
- Prior to implant placement, a radiopaque duplicate denture (\$200) needs to be made as a surgical guide with appropriate locations drilled for implant placement.
- After initial implant healing, denture needs to be temporized with temporary abutments (\$40 ea) to allow for adequate tissue healing.
- Initial impressions with polyvinyl and impression copings.
Custom Tray \$100 Impression Copings \$70 ea
- Lab makes screw retained wax rim for bite registration (must radiograph to insure complete seating of parts to implants) \$100 + \$65 per implant.
- Lab makes acrylic jig with impression copings to be luted in the mouth with pattern resin (must radiograph parts to insure complete seating)
Jig \$100 + \$70 per implant. Model work approx \$200 incl. mounting.
- Lab makes screw retained wax tryin with denture teeth to verify bite registration (must be radiographed) \$300.
- Lab creates framework to be tried in (radiograph required) \$2500-\$4800 Custom abutments for C+B \$315-\$415 ea.
- If Hybrid denture, wax tryin with framework needed. If conventional or screw retained crown and bridge, bisque tryin needed for verification of bite and esthetics. Tooth setup over bar \$125 & Denture teeth approx \$250. Porcelain application over framework approx. \$200 per tooth.
- Final processing and completion. Denture processing \$400.
- Approximate total lab fees for Hybrid denture \$6400, conventional C+B over abutments \$7800, Screw retained Zirconia bridge \$9800.
